

Are You Ready to Convert?

In November 2014 the U.S. Department of Energy banned the production of magnetic sign ballasts for use in the United States. Moving forward, electronic sign ballasts will be used to retrofit and replace existing magnetic ballasts. Make this conversion a breeze with Universal Lighting Technologies Wiring Blocks.

Universal's Wiring Blocks allow quick and easy conversion of rapid start magnetic ballast installations (series wired) to instant start electronic ballasts (parallel wired). Simply cut the existing magnetic ballast leads, mount the new electronic ballast, then strip and insert all ballast and lamp leads into the color coded wiring block.

FEATURES

- Easy to follow step by step instructions are printed on every package
- Detailed images are included for correct cutting and splicing of wires
- Poke in terminals are color coded to match ballast wires
- UL listed for field wiring

Part #	Description
WB44-010C	4-Lamp ballast operating 4 lamps
WB64-010C	6-Lamp ballast operating 4 lamps
WB65-010C	6-Lamp ballast operating 5 lamps
WB66-010C	6-Lamp ballast operating 6 lamps

Make sure you are ready for the conversion. Wiring blocks are available for 4, 5, and 6 lamp installations using either four or six lamp ballasts.

For wiring ease, an extension harness is also available to extend the magnetic ballast leads up to 24". [P/N WBEXT-010C](#)
