FOR IMMEDIATE RELEASE

NEW EVERLINE® LED DRIVERS & MODULES BRING VERSATILITY TO TRACK/DOWNLIGHT APPLICATIONS

NASHVILLE, Tenn. (October 31, 2012) – The expanding family of EVERLINE® LED drivers and modules now offers amazing versatility in both light output and control for track and downlight applications. Ideal for developing full luminaire lines with incredible range, these EVERLINE LED products deliver up to 90+ lumen-per-watt system performance—providing significant cost savings in both energy and maintenance over halogen, CFL, and low-wattage metal halide lighting systems.

EVERLINE's round LED modules offer crisp, even illumination from 1,000 to 10,000 lumens. With EverTru™ Chip on Board technology and a 50,000 hour lumen maintenance of 80% or higher, they can satisfy even the strictest demands for quality, color, energy efficiency, and long life. At the same time, EVERLINE's LED drivers provide unsurpassed control capabilities for track and downlight luminaires ranging from 15 to 150W—with 350mA, 700mA, and 1,050mA options available.

With a compact light emitting surface area ranging from 0.53 to 1.69 inches in diameter and a wide array of color temperature options including 2,700K, 3,000K, 3,500K, and 4,000K models, UL® Class 2 recognized EVERLINE round LED modules are designed for uniform light distribution and optimum reflector design. Plus, EVERLINE LED drivers are available in multiple housing configurations (including side or bottom exit with mounting feet or studs) for maximum versatility in fixture design. Together, they offer an ideal solution for both fixed light output and analog dimming applications with standard 0-10V controls.
