FOR IMMEDIATE RELEASE

Universal Announces Online Rebate Search Tool and Local Energy Partner Network to Assist End-User Lighting Upgrades

NASHVILLE, Tenn. (Sept. 4, 2018) – Universal Lighting Technologies, Inc., a global leader in lighting and a member of the Panasonic Group, offers a rebate tool on their webpage, to help end-users find cost saving solutions for their lighting projects. The online resource portal is ideal for end-users looking for assistance with a lighting upgrade by finding what rebates may exist in their local market.

The rebate tool, found on the ESCO Support web page, allows users to search by zip code and state and choose a local utility program, to view eligible products. Designed with both the end-user and energy team in mind, the online search tool provides access to over 650 DesignLights Consortium® (DLC®)-qualified products.

In addition to the support tools designed to assist with upgrades, the company has partnered with local energy teams, via an exclusive “ESCO Select” program, to provide end users with local installation support for lighting upgrades. The ESCO Select energy partners can work with end-users to conduct on-site lighting audits for their projects and recommend comprehensive total energy saving strategies.

“Most Energy Managers would like to upgrade their stores' lighting efficiency while significantly reducing costs. It's easier than most end users think to target their goals of energy savings and lower maintenance costs,” said Susan Phillips, Universal’s Vice President of Marketing. “We’ve put a process in place to assist end users with not just the search for the right product eligible for local rebate programs, but also the local energy partner to help simplify the process.”

Universal, has expanded their EVERLINE LED line providing a range of solutions for upgrading fluorescent to LED. Universal’s expanded line now offers an LED retrofit continuum from Tubes (T8 Replacement, AC Direct Ballast Bypass, U-Bend, T5HO) to light engine retrofits (Tube and Driver Kits, LED Retrofit Kits, LED Strip Assembly, LED Pan Style Retrofit) to full luminaire replacements.

“If your building is over eight years old, you should consider a lighting evaluation. Not only can LED save 30% to 50% immediate energy savings over a conventional system, but by using EVERLINE retrofit solutions with up to 140,000+ lifetime hours you are reducing maintenance costs as well,” Phillips continued. “Universal’s 7 decades of lighting experience plus expansive manufacturing facility which specializes in LED combined with lighting audit assistance with a local ESCO Select distributor partner means the right turnkey solution for you. Satisfaction is our priority.”
